Decision Tree for Exposures to COVID-19 in Child Care, Youth Activities, and Households (while NOT in TK-12 schools) current as of 9/2/21

Exposure to student or staff who tested positive to COVID-19 (case)

Was the student/staff within 6ft of infected person for more than 15 mins over a 24hr period?

There are no close contacts who need to quarantine

NO

Does the exposed person (contact) have any symptoms?

NO

Is the exposed person (contact) vaccinated?

YES

Does the exposed person (contact) have any symptoms?

NO

NO/UNSURED

YES

QUARANTINE: Person must stay home for at least 10 days and test on Day 5 after last exposure with positive person. If ongoing exposure is occurring in the home, quarantine period may be extended, contact public health for guidance. Unvaccinated students/staff may return on Day 8 after a negative test on Day 5, or cohort may close for 10 days if desired.

Monitor symptoms for 14 days and may return to school, work, and other activities. Testing recommended on Day 5 after last exposure to positive person. If symptoms develop, student/staff must isolate and test.

Asymptomatic vaccinated staff returning from out of state travel may return to work, monitor symptoms, and test on Day 5 after returning home.

Unvaccinated staff and children who are returning from out of state travel should quarantine at home and may return on Day 8 with a negative test on Day 5 after returning home from travel.

Exposed student/staff must test right away, stay home, and keep away from others they live with who don’t have symptoms or COVID-19 (if possible). Isolate for 10 days if positive. If test is negative, test again on Day 5 after last exposure. If ongoing exposure is occurring in the home, quarantine period may be extended.

Note on guidance: Any guidance with the word "must" are mandated orders. Guidance with the word "should" are strongly recommended but not mandated.
